CONVEX[®]
VISION

SHARED PLATFORM

Every Lens Runs on the Same Technology

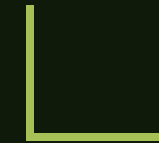

Ray-Path 2

Works with the eye's natural mechanics to eliminate distortion and deliver precise, comfortable vision at every distance.

Steady Methodology

Holds the prescribed power stable across the full corridor, for unmatched power control from distance to near.

Camber Technology

Shapes the near-zone geometry for superior reading areas — wider and more relaxed for the wearer.

SHARED PLATFORM

A Wider, Calmer Field of Vision

Distance

Intermediate

Near

The eye is always moving. Every lens in the collection anticipates how the wearer looks — near, far, and everything between — correcting distortion before it reaches them.

The result at the chair: a wider, more usable field of vision and crisp, relaxed clarity wherever the patient looks — with a shorter adaptation curve for both new and returning progressive wearers.

Optima Dual **Digital X**

Ultra**Lux**

Optima **HD**

Ultra**Lite**

Optima **Plus**

THE COLLECTION — 1 OF 6 · FLAGSHIP

Matrix HD

Recommended flagship

- The full Ray-Path 2 platform, tuned for the near and digital-heavy tasks — phones, screens, close indoor work
- Widest near and intermediate zones in the collection via Camber Technology
- **Recommend for:** patients spending most of the day on screens or close work

Optima Dual Digital X

- Dual-surface digital design — corridor optimization is split across front and back surfaces for a faster distance-to-near transition
- Steady Methodology holds power through rapid head movement — built for active, outdoor-to-digital days
- **Recommend for:** active patients moving constantly between distance and device

UltraLux

- The premium clarity tier — the widest distance zone in the collection, refined for contrast and low peripheral swim
- Full Ray-Path 2 correction across the largest usable field in the range
- **Recommend for:** driving, outdoor work, and patients sensitive to peripheral distortion

THE COLLECTION — 4 OF 6

Optima HD

- The versatile, all-purpose design — balanced distance, intermediate, and near zones for everyday life
- Standard Ray-Path 2 correction with a well-proven adaptation curve
- **Recommend for:** first-time and general-purpose progressive wearers

UltraLite

- Built around a thinner, lighter form factor without giving up the Ray-Path 2 corridor
- Reduced edge and center thickness at higher powers, for lighter frames and less pressure on the nose
- **Recommend for:** higher prescriptions and patients sensitive to lens weight

Optima Plus

- The accessible entry point into the collection — core Ray-Path 2 correction at a lower cost tier
- A dependable, well-tolerated corridor for patients new to progressives
- **Recommend for:** value-conscious and first-time progressive patients

Built for Both New and Mature Wearers

Ease of adaptation and comfort remain the paramount requirements when selecting a progressive — across every tier in the range.

Quick Adapt

A shorter learning curve for patients moving from single-vision or an earlier progressive design.

Sharp Focus

Consistent acuity through the full corridor, not just at the optical center.

Light Feel

Thinner, lighter forms across the range keep frames comfortable through the full day.

**Clarity you can feel,
protection that lasts.**

Better lenses. Better days.
