

FOR OPTICIANS & EYEWEAR RETAILERS

Office Lenses

Clear, relaxed vision keeps people focused and productive at work — the progressive lens line built for a full day at the screen.

Progressive Office Plus

Progressive Office

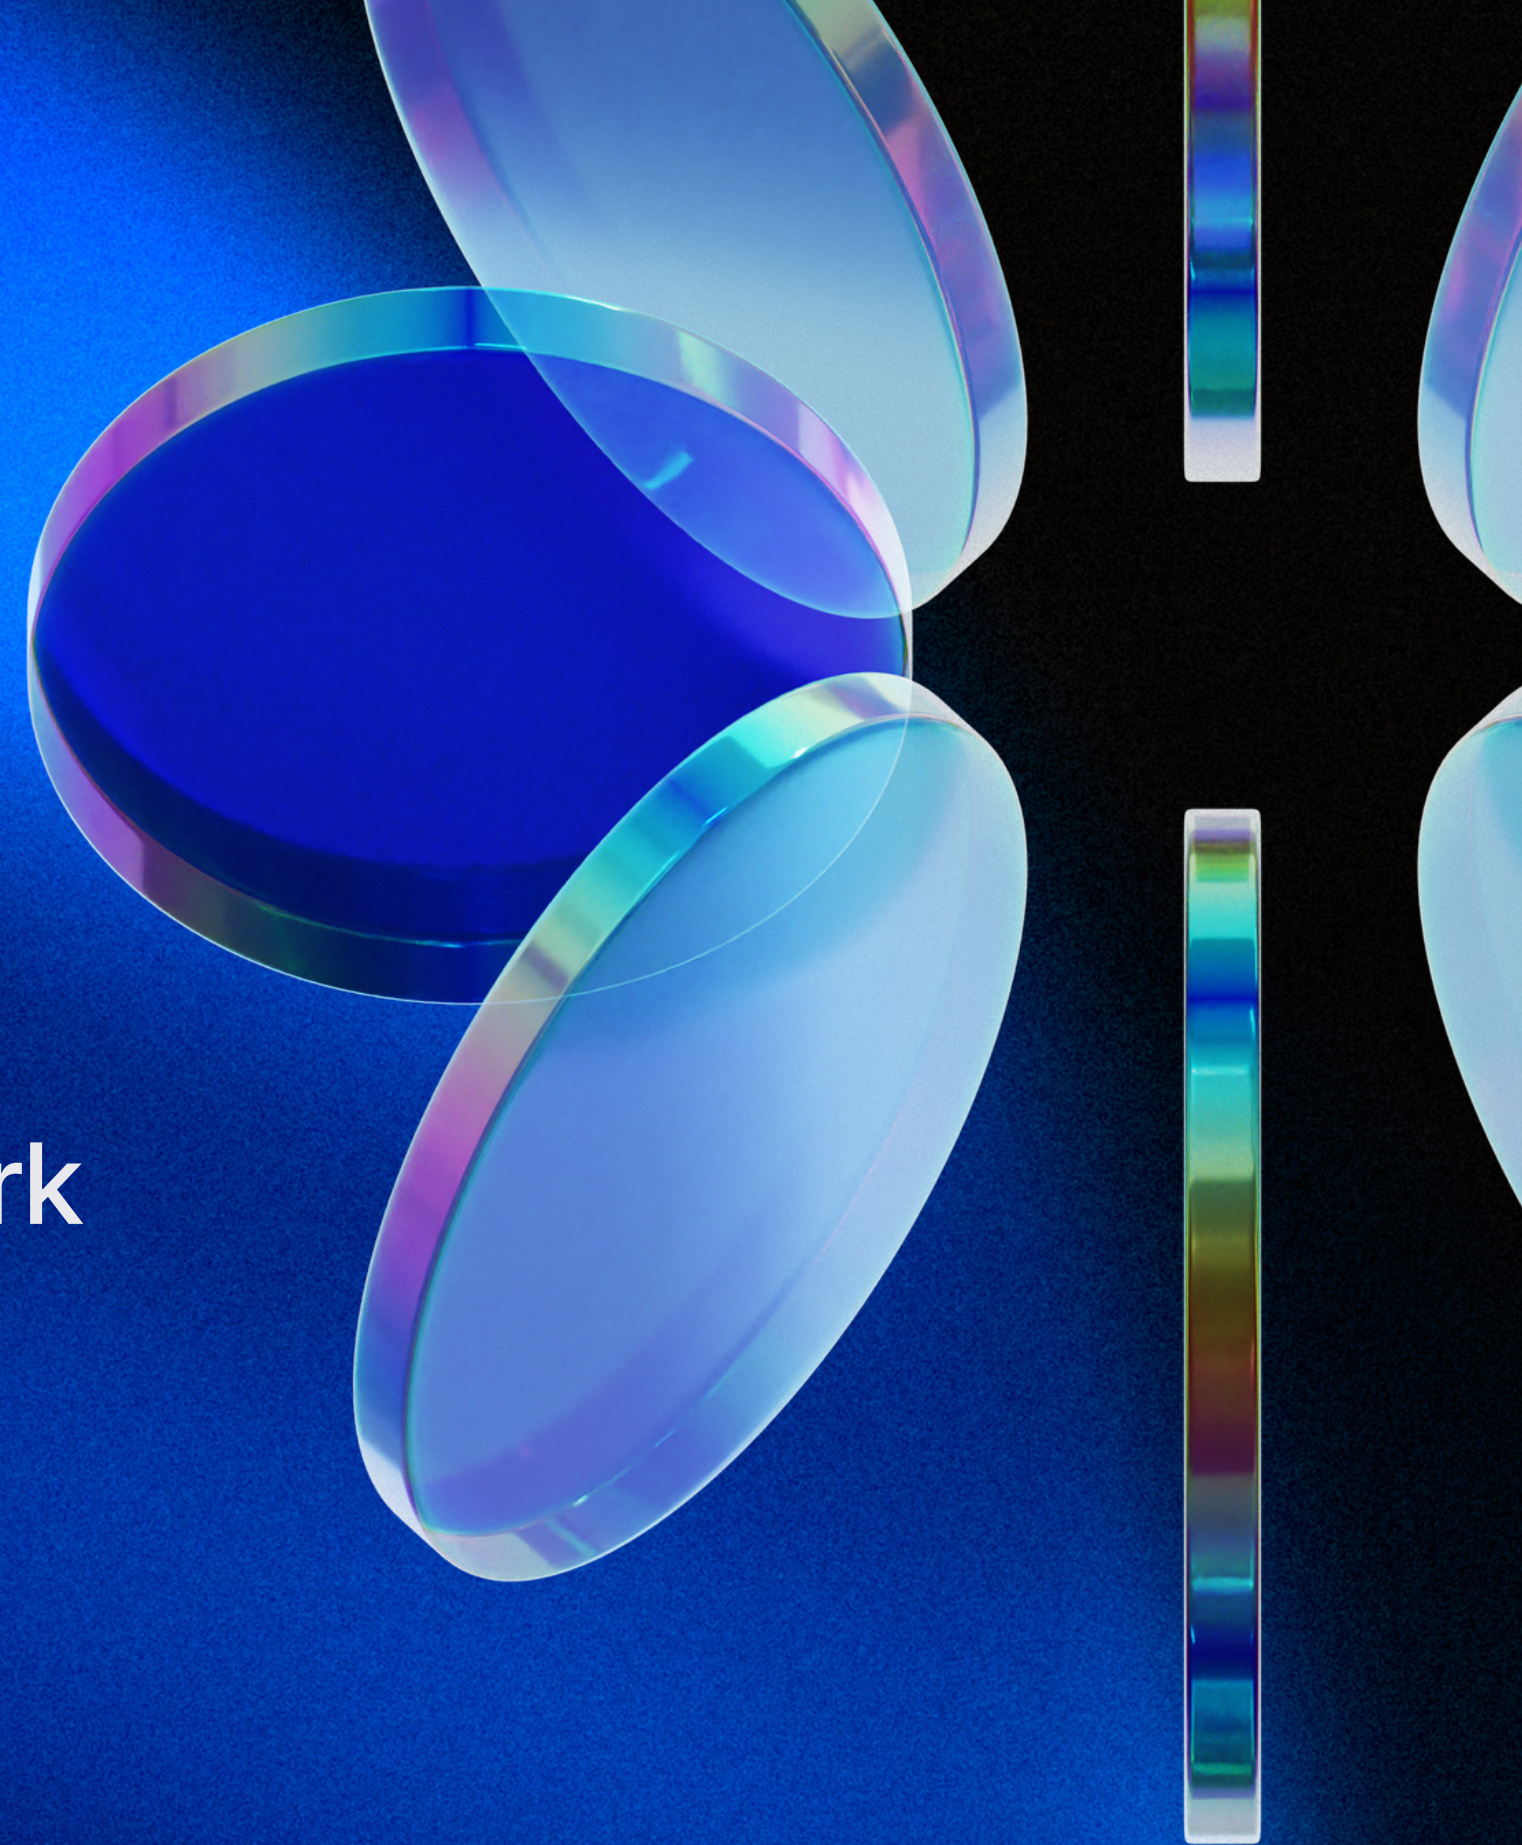

THE OFFICE VISION PROBLEM

Screens have changed how people work and how their eyes pay for it.

Daily computer work forces improper posture of the body, neck and head. Over the course of a workday that shows up as headaches, discomfort looking at the screen, and blurred vision — exactly the complaint your presbyopic customers bring to the counter.

Office Plus and Office progressives exist to answer that complaint with a clear near view and a natural head and body position.

PREMIUM LINE

Progressive Office Plus

Specially designed for office use and long-term computer work, with individual parameters built in as standard — a natural head and body position, without the trade-offs of a general-purpose progressive.

- Clear vision at near distances
- Natural head and body position
- Optimized for various working distances
- Low level of aberrations

Minimum fitting height 15mm

WHY STOCK IT

The recommend-first line

Office Plus includes average individual parameters as standard, so most wearers get a well-fitted lens without a custom order — fewer remakes, faster turnaround.

Three fields of view, one comfortable fit

TYPE BOOK

Reading distances

Clear vision from 38cm to 100cm — built for document and desk-level reading.

TYPE NEAR

Intermediate distances

Clear vision from 38cm to 200cm — the everyday balance for mixed desk and screen work.

TYPE ROOM

Indoor, whole-room

Clear vision from 38cm to 400cm — for meetings, presenting and moving around the office.

- **Calculation at every point**

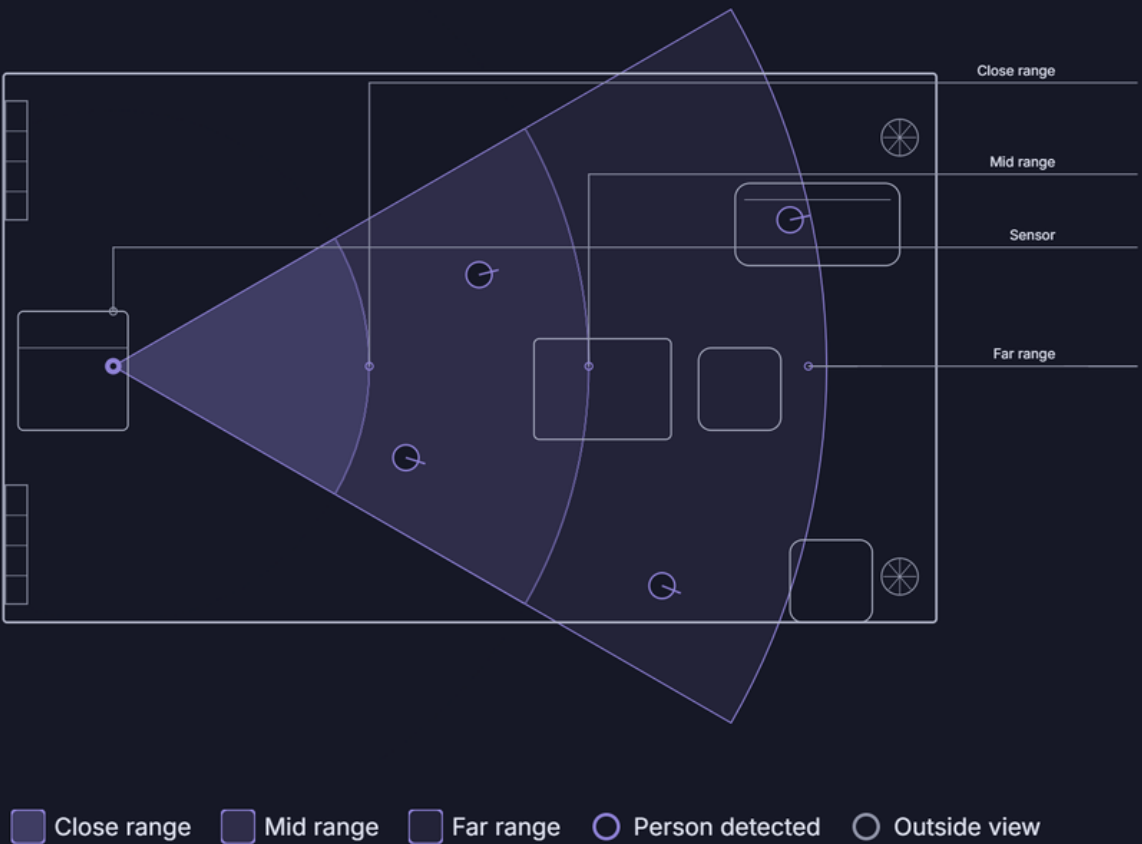

Thousands of individual points calculated for distributed dioptric power and higher quality of vision.

- **Binocular optimization**

Left and right lenses are balanced together for aberration symmetry and stable vision.

- **Aberration control · FaceFit**

Prescription power recalculated with individual parameters for a wider, clearer field of view.

WHY STOCK IT

The everyday alternative

Where a customer's day is mostly reading and near work rather than mixed distances, Office gives the widest, most comfortable near field at a more accessible price point.

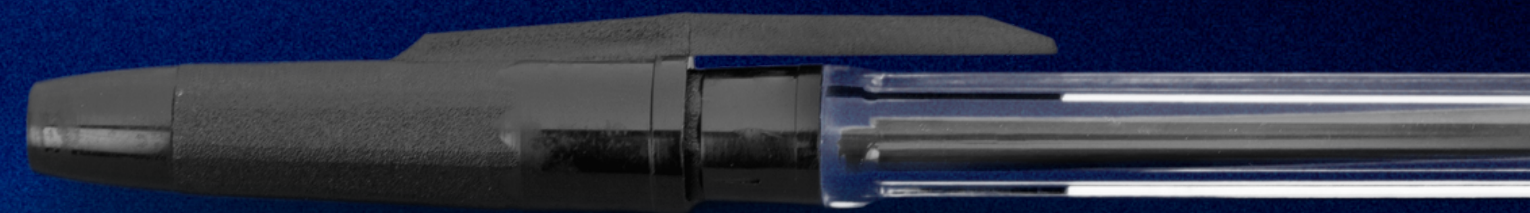

ALTERNATIVE LINE

Progressive Office

Near-distance correction with a very wide field of view at intermediate distances, and limited far-distance correction — for relaxed work and maximum reading comfort.

- Expanded field of vision for near distance
- Enables a proper, natural body position
- Maximum reading comfort

Minimum fitting height 15mm

AT THE COUNTER

Which line fits the customer?

PROGRESSIVE OFFICE PLUS

Mixed desk & screen work

Best for: customers who move between screen, desk and room — the majority of office workers.

Field of vision: BOOK, NEAR or ROOM — chosen per role.

Fitting height: from 15mm.

PROGRESSIVE OFFICE

Reading-heavy near work

Best for: customers mostly reading or working close-up, with little need for far vision.

Field of vision: wide near field, limited far correction.

Fitting height: from 15mm.

A RANGE THAT FITS EVERY FRAME
